

English introduction to MECAL:

MECAL is an independent high-tech engineering company, which established in 1989. It is the largest engineering consulting company in the Netherlands wind power industry. MECAL provides turbine design, component and control system design, analysis, certification reports and field measurements. MECAL independently developed a new precast concrete hybrid tower system and installed a prototype of the new hybrid tower in Germany wind power test site, and it has been operating safely for 13 years since 2009. In 2018, MECAL's hybrid tower has been constructed in China as well, and it has been operating normally over 4 years. MECAL provides technology transfer of hybrid tower, design and installation engineering services of hybrid towers for domestic customers.
