

Founded in 2009 and located in Yixing City, Jiangsu Province, Yixing Huayong Electric Motor Co., Ltd. is a national high-tech enterprise specializing in the R&D, production, manufacturing and sales of wind power motors.

The company's main products fall into three categories: doubly-fed asynchronous motors, squirrel-cage asynchronous motors, and permanent magnet semi-direct drive motors. These products meet the requirements of various operating conditions such as high-altitude and offshore environments. It boasts R&D and design capabilities for wind turbines ranging from 1.5MW to 10MW, along with an annual mass production capacity of 4,000 units.

As of December 2024, the company has supplied over 11,000 units in total. Its major customers include Guodian United Power, Envision Energy, Mingyang Smart Energy, Yunda Stock, Goldwind Science & Technology, CRRC Zhuzhou, Sany Heavy Energy, and Vestas.

The installed capacity of the motors matched with main engine customers reaches approximately 32.5GW, distributed in more than 300 wind farms at home and abroad. In the overseas market, the motors matched with main engine manufacturers have achieved a total installed capacity of about 700 units in countries like Vietnam, India, Saudi Arabia, and Uzbekistan.

With the longest safe operation period of its motors exceeding 15 years, the company ranks among the top three in China's wind power motor market in terms of shipment volume of core products, and secures the first place in the private sector.
